

Protect and improve healing with Pocket-X[®] Gel

Achieve periodontal treatment results you and your patients will love.

leading regeneration

Geistlich

Target. Protect. Improve healing.

Achieve your treatment goals.

Scaling and root planing (SRP) is an effective method to combat periodontal disease, but it cannot eradicate all pathogens.¹ In addition, periodontal pockets are at high risk of bacterial recolonization.¹

Using a product that provides effective protection from bacteria is the key to consistently achieving the results you and your patients want and deserve. **Pocket-X® Gel mitigates bacterial regrowth and protects the pocket from becoming reinfected.**²

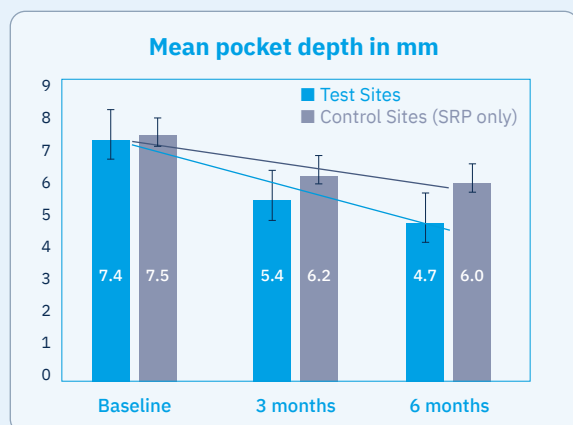

By integrating Pocket-X® Gel into your treatment plan, you will see a clear increase in the overall healing of pockets², which sets you and your patients up for long-term success.

How can Pocket-X® Gel help you succeed in your treatment goals?

- Easy to apply inside the periodontal pockets
- Liquid at room temperature, but transforms into a viscous gel within seconds after application
- Targets and fills even hard-to-reach, deep periodontal pockets
- Protects the pockets from bacterial recolonization and improves healing of the gingiva³
- Can increase recall intervals by improving the factors pocket depth and bleeding on probing²

When can you use Pocket-X® Gel?

- As an adjunct to SRP in initial periodontal therapy
- During supportive periodontal care (maintenance phase)

Pocket-X® Gel is your key to significantly improved pocket depth reduction and clinical attachment gain:

Pocket-X® Gel showed an impressive > 1 mm additional reduction of mean pocket depth and nearly 1.5 times more clinical attachment level gain than SRP alone at 6 months after treatment.²

Use Pocket-X® Gel to significantly reduce bleeding on probing:

Pocket-X® Gel is a clear winner: it has shown to reduce bleeding on probing by an additional 15% at 6 months after application, and demonstrated complete healing of 46% more pockets with initial depths of 5–6 mm than pockets treated with SRP alone.²

Gain confidence and trust

Your choice for success.

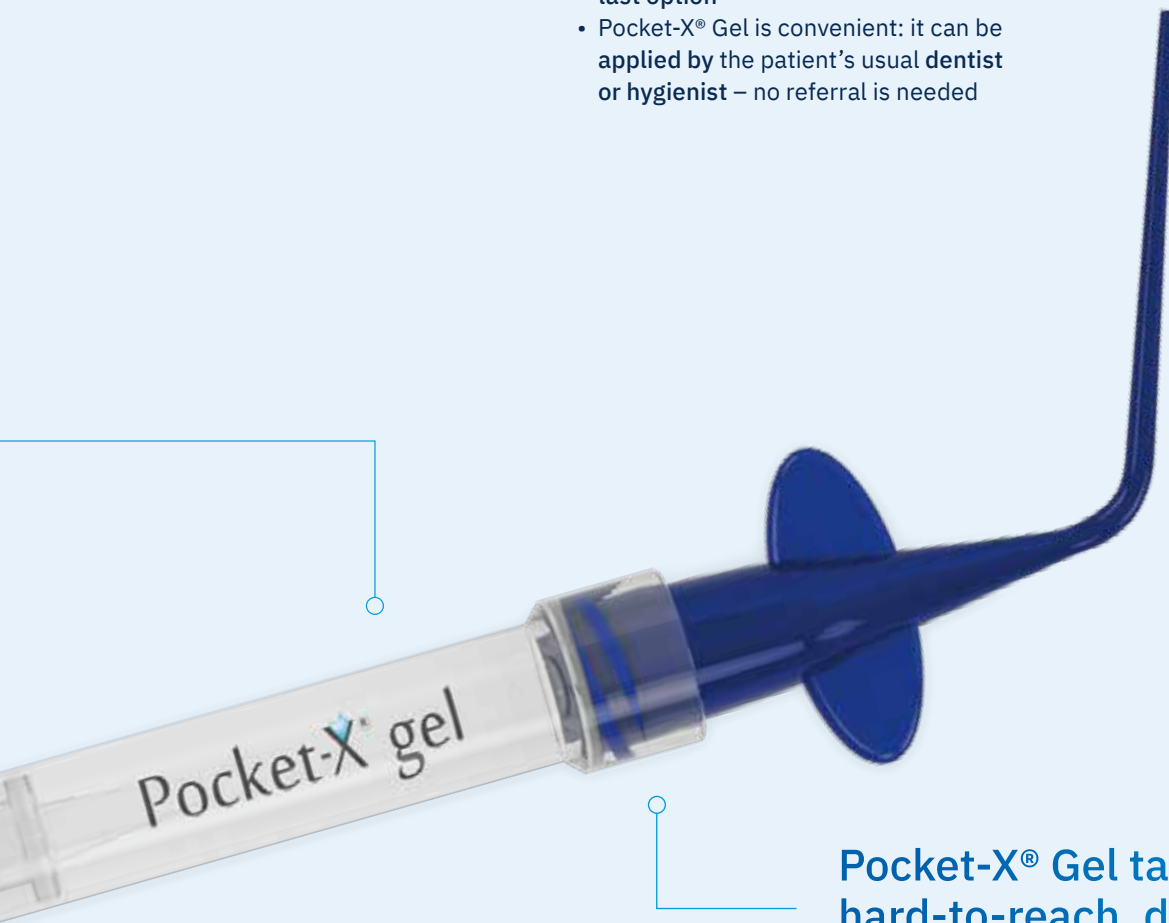

Your patients' trust in your methods is essential for their cooperation and, consequently, ensuring their treatment is effective and long-lasting.

What makes Pocket-X® Gel a solution you and your patients can trust in?

- Pocket-X® Gel allows you to postpone or avoid time-consuming, complex and painful operations, meaning you and your patients can rest assured that surgery is only resorted to as a last option
- Pocket-X® Gel is convenient: it can be applied by the patient's usual dentist or hygienist – no referral is needed

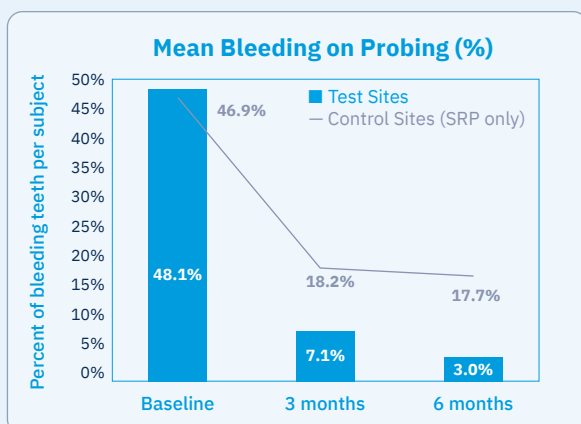

What makes Pocket-X® Gel so unique?

- Novel in-situ liquid-to-gel vehicle² unlike anything else on the market
- Physical mode of action prevents bacterial recolonization and improves healing of the gingiva³
- Patented innovative formulation
- Pioneering blend of ingredients:
 - Thermosensitive Poloxamer 407
 - Hyaluronic acid
 - Octenidine HCl antimicrobial preservative

Pocket-X® Gel targets even hard-to-reach, deep pockets as a liquid and then transforms into a protective gel:

A novel formulation like no other, Pocket-X® Gel is liquid at room temperature and transforms into a viscous gel when it comes into contact with the gingiva. Unlike other purely liquid or purely viscous solutions, Pocket-X® Gel fills the periodontal pockets and does not leak out.^{2,4}

Protect and improve the healing
of periodontal pockets.

Achieve your treatment goals.

Pocket-X® Gel delivers the results you and your patients want
and deserve, and ensures the treatment you provide is a
success – from start to finish.

Pocket-X® Gel is available in packs of 3 syringes, each containing
1.0 ml. One syringe is typically sufficient for several periodontal
pockets in one patient (usually 5–10 pockets). For additional ease
of application, a longer blue tip and a shorter red tip with a brush
are included with each syringe.
