**STYLE ITALIANO™**

## 24 solutions for your class II restorations

### Advantages

---

Flexible to allow to carefully bend the matrix to shape without collapsing into the cavity

---

Embrace the matrix: optimal contact points

---

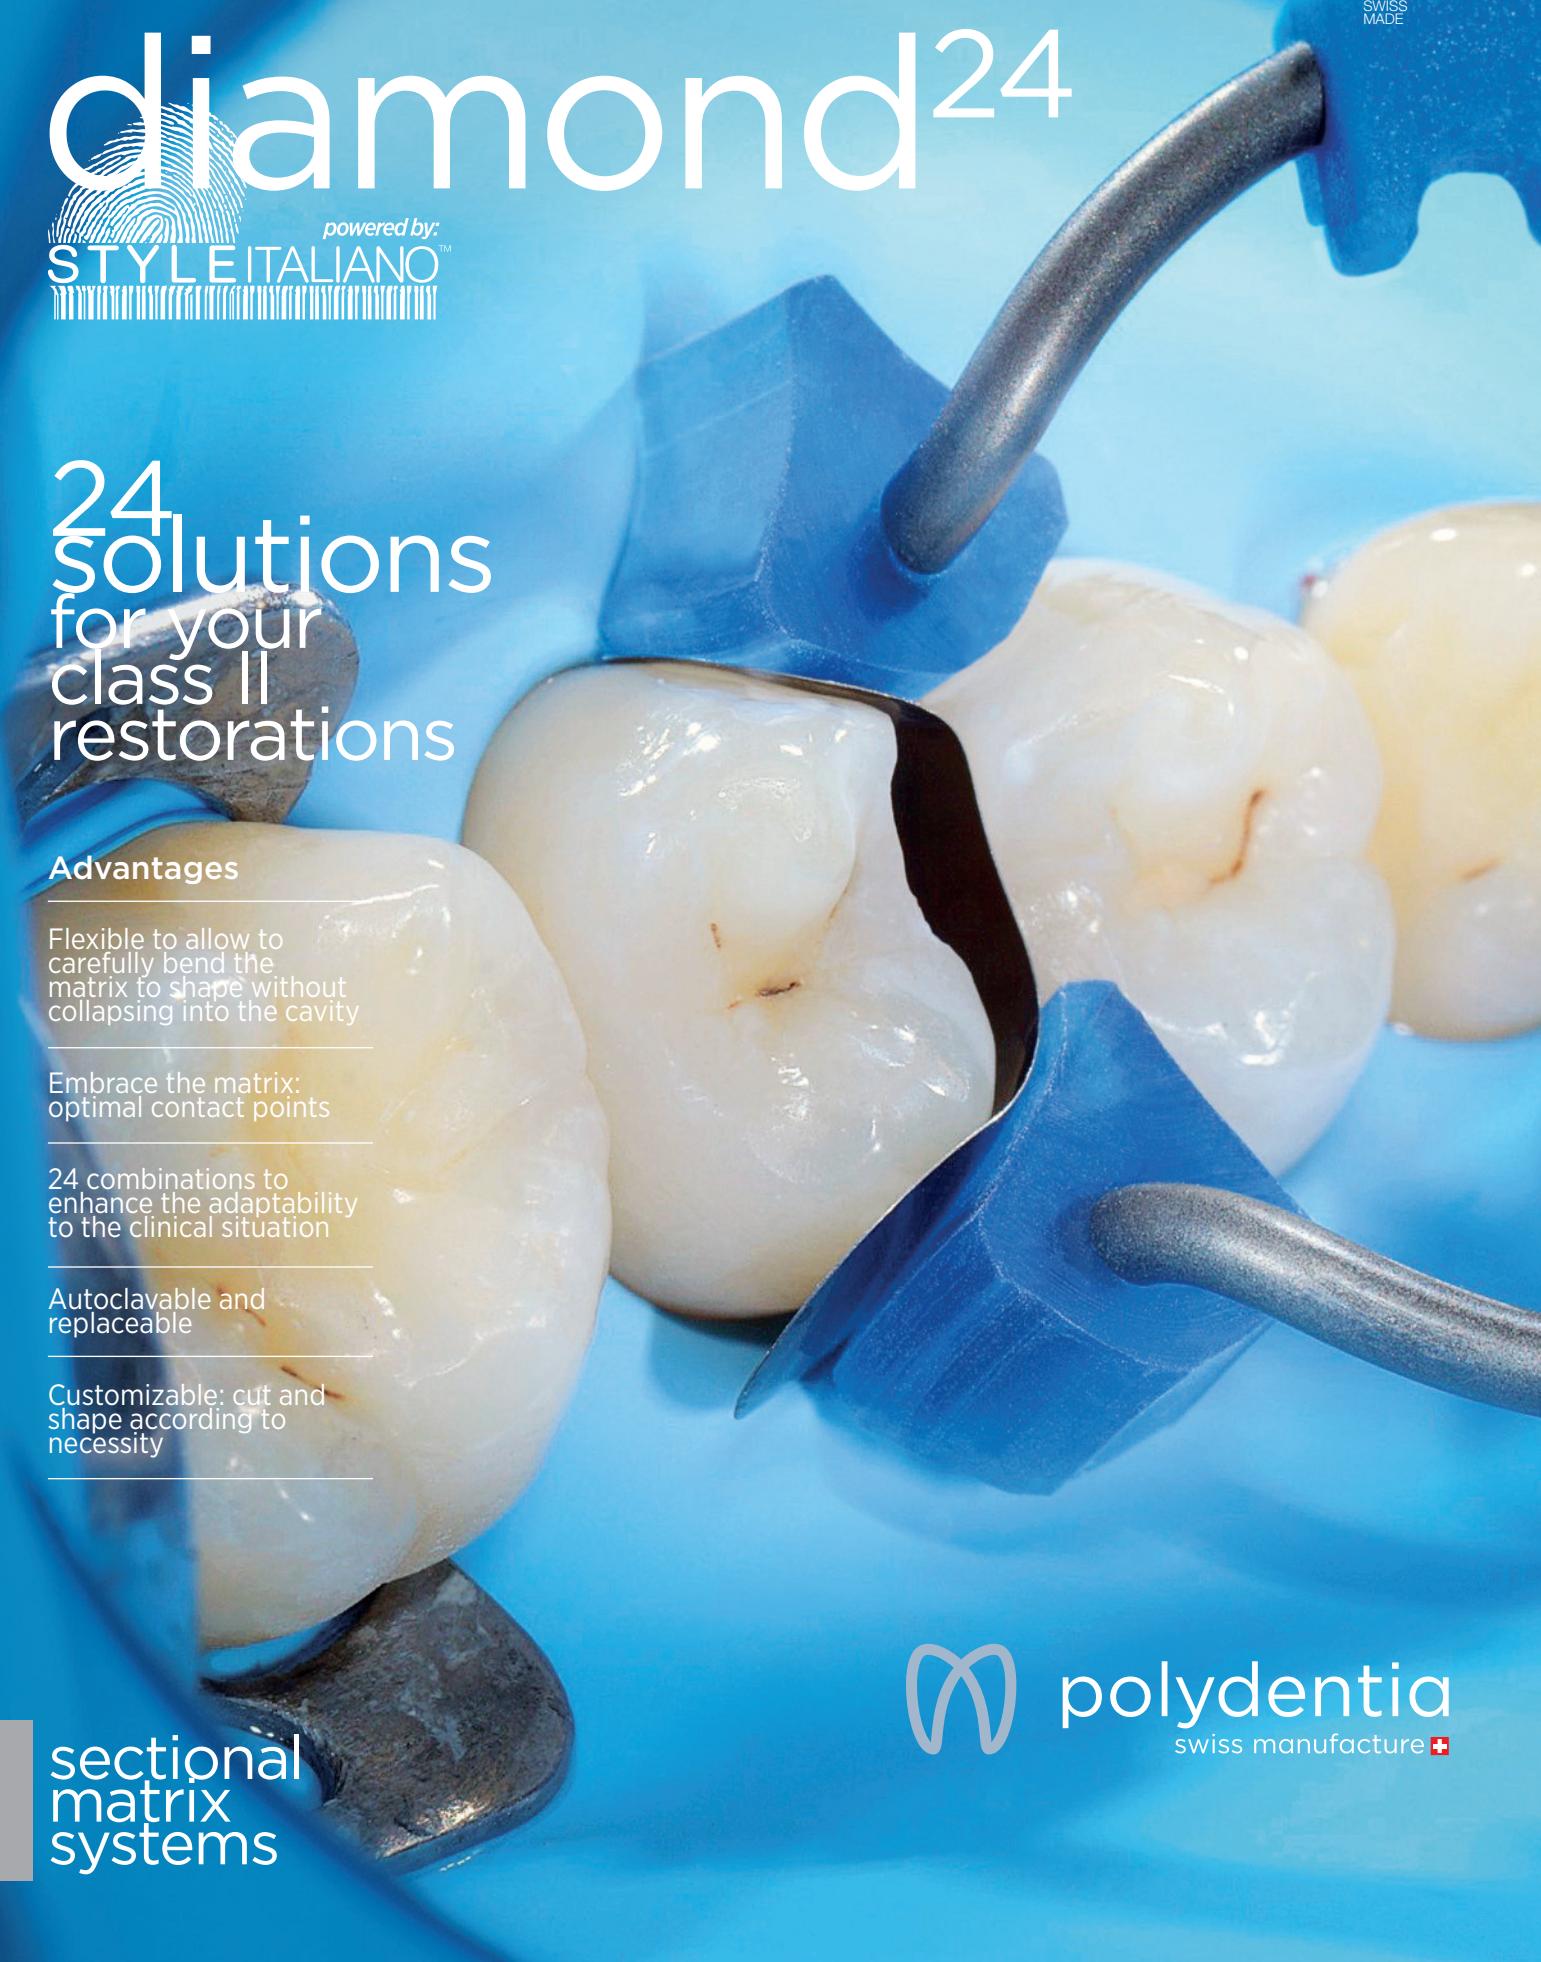

24 combinations to enhance the adaptability to the clinical situation

---

Autoclavable and replaceable

---

Customizable: cut and shape according to necessity

sectional  
matrix  
systems

## 24 solutions for your Class II restorations

### Testimonial

*"Diamond<sup>24</sup> offer additional flexibility than standard silicon tubes enhancing the adaptation of the sectional matrix system to the clinical situation. The 24 possible combinations of size and shape of Diamond<sup>24</sup> ensure an optimal retention of the matrix to the palatine and buccal walls, without damaging and collapsing into the cavity."*

Dr. Giuseppe Chiodera,  
Brescia - Italy

Diamond<sup>24</sup> are anatomically shaped silicon tubes designed to be used with Polydentia's sectional matrix ring "myRing Classico". Diamond<sup>24</sup> can be oriented in 24 different combinations of shape and length ensuring an optimal matrix retention and adaption to the tooth even in case of difficult clinical situations.
