

Helioseal® F Plus

Product Description

Helioseal® F Plus is a light-curing, white-pigmented fissure sealant featuring fluoride release. With the handy syringe, the fissure sealant can be precisely dispensed and applied exactly where it is needed. The syringe comes with a fine cannula that allows the fissure sealant to be applied quickly and precisely and prevents overfilling.

Indication

Helioseal F Plus is used for the sealing of pits, fissures and foramina caeca in deciduous or permanent dentitions. Helioseal F Plus is suitable for use in children, adolescents and adults.

Product features	Customer benefits
New formula for optimized consistency	Optimum sealing of pits and fissures with a complex morphology
Precise dispensing and application	Efficient treatment
Reduced exposure time	Quick, comfortable treatment of children

Core message

Helioseal® – for the protection of pits and fissures
 Helioseal® F Plus – the efficient fissure sealant containing fluoride

Further product properties

- Bonds intimately to dental enamel → long-term retention
- Tight marginal seal → defence against cariogenic bacteria
- Fine-grained fillers → Smooth seal of the surface

Positioning in the portfolio

Fissure sealants are a classical, effective means of preventing dental caries. The Helioseal family of products comprises the fissure sealants Helioseal F Plus, Helioseal Clear and Helioseal. The sealant range is an important component of the i-Kids program. Helioseal F Plus replaces the predecessor product Helioseal F.
